Carlsbad Construction Updates

This email is to keep you apprised of the Carlsbad Desalination Pipeline construction progress. We encourage you to share these emails with your employees and anyone who might be interested in work along the pipeline route within or adjacent to the Carlsbad Research Center.

Upper Carlsbad Research Center Construction

Construction crews are wrapping up pipeline installation in a few areas within the Carlsbad Research Center (CRC) and, in an effort to expedite work, will begin working some Saturdays.

Crews are continuing to make progress tunneling under the Faraday Avenue/Rutherford Road intersection which is expected to conclude by October. Construction crews are continuing pipeline installation east of Rutherford Road and have begun preparing the tunnel access pits on either side of the Faraday Avenue/Priestly Drive intersection. By tunneling under these critical intersections, crews will be able to further reduce their project footprint and maintain access and traffic flow throughout construction.

Lower Carlsbad Research Center Construction

Construction crews are continuing pipeline installation along Faraday Avenue east of Cannon Road and have reached the 1500 block of Faraday Avenue. Soon, work will resume approximately one-quarter mile west to complete a 500-foot section of pipeline closer to Cannon Road.

Construction crews have completed street restorations from Veterans Park to the western boundary of the CRC, and are currently working on median restoration.

Pipeline installation continues along Faraday Avenue.

During construction, drivers should expect temporary lane closures, detours, reduced lane widths and equipment along the route and should use caution and allow more time to reach their destination. Construction updates will be shared on [Facebook](#), [Twitter](#) and the Project [website](#). To learn more about the Carlsbad Desalination Project, please visit www.carlsbaddesal.com.
