Carlsbad Construction Updates

This email is to keep you apprised of the Carlsbad Desalination Pipeline construction progress. We encourage you to share these emails with your employees and anyone who might be interested in work along the pipeline route within or adjacent to the Carlsbad Research Center.

Upper Carlsbad Research Center Construction

Tunneling activities at the Rutherford Road and Priestly Drive intersections along Faraday Avenue are complete and crews will be completing street restorations this Friday, October 3. Starting Saturday, October 4, traffic will return to its normal configuration along Faraday Avenue between College Boulevard and Priestly Drive.

Also beginning Saturday, crews will be installing traffic control along Faraday Avenue from Priestly Drive east towards Orion Street, in preparation for pipeline construction. In that area, traffic will be limited to two lanes, one in each direction, along the north side of Faraday Avenue. Additionally, the east- and west-bound left turn lanes from El Camino Real onto Faraday Avenue will be reduced to one turn lane in each direction. For suggested detours around the construction area, click [here](#).

Tunneling will begin under the El Camino Real and Orion Street intersections along Faraday Avenue in early October, while pipeline installation progresses east towards Orion Street. This section of pipeline will be completed in November, with the exception of a 500-foot section adjacent to Palmer Way, which will be completed in December.

Lower Carlsbad Research Center Construction

Construction crews working to install the pipeline along Faraday Avenue east of Cannon Road have completed the 500-foot section west of the Carlsbad Research Center, and will begin median restorations this week. Construction crews will begin pipeline installation activities near the 1600 block of Faraday Avenue and will continue east toward College Boulevard.

During construction, drivers should expect temporary lane closures, detours, reduced lane widths and equipment along the route, and should use caution and allow more time to reach their destination. Construction updates will be shared on [Facebook](#), [Twitter](#) and the Project [website](#). To learn more about the Carlsbad Desalination Project, please visit www.carlsbaddesal.com.
