Carlsbad Construction Updates

This email is to keep you apprised of the Carlsbad Desalination Pipeline construction progress. We encourage you to share these emails with your employees and anyone who might be interested in work along the pipeline route within or adjacent to the Carlsbad Research Center.

Carlsbad Research Center Construction

Crews are currently installing pipe near the Newton Drive/Faraday Avenue intersection, heading east toward Van Allen Way. Construction along this segment is scheduled to be completed in mid-January.

Other Construction

Pipeline installation activities continue between Palmer Way and Orion Street along Faraday Avenue just east of the Carlsbad Research Center. Construction crews are making steady progress along this segment, which will be completed in January 2015.

Tunneling and paving are complete along Faraday Avenue between Priestly Drive and just east of El Camino Real, and traffic along this segment has returned to its normal configuration. Crews will return for final street restorations once construction along Faraday Avenue is complete in January.

Crews are continuing to tunnel under the Faraday Avenue/Orion Street intersection. By tunneling under this critical intersection, crews are able to further reduce their project footprint and maintain access and traffic flow throughout construction. Tunneling and restoration activities will be completed at the Orion Street intersection in late January.

During construction, traffic along Faraday Avenue between Palmer Way and Orion Street is limited to one lane in each direction along the north side of the road.

East of the Carlsbad Research Center along Faraday Avenue, construction crews continue pipeline installation activities between Orion Street and Whiptail Loop West. Pipeline installation and paving along this segment of Faraday Avenue will be completed in January.

During construction, drivers should expect temporary lane closures, detours, reduced lane widths and equipment along the route, and should use caution and allow more time to reach their destination. Construction updates will be shared on [Facebook](#), [Twitter](#) and the Project [website](#). To learn more about the Carlsbad Desalination Project, please visit www.carlsbaddesal.com.
